

Foil Products

Household Aluminium Foil

Properties:

- High strength and durability
- Good flatness control and clean surface
- Workability in high speed machines
- Reduction in effects of light, moisture, oxygen, liquids, microorganisms and unwanted aromas
- Effective protection of contents as well as the quality and prevention from the spoilage of sensitive products
- Resistance against the highest temperatures encountered in cooking
- Prevention from the decrease of oven heat; when used in cooking to cover a dish, piece of meat or poultry to help the heat conductivity
- Used for protecting food from being dried or over-cooked in a microwave oven, as microwave energy cannot pass through metal
- Prevents from spring back once folded

Applications:

- Used in the kitchen and around the home, in the garden and workshops
- In commercial kitchen, restaurants, schools and hospitals
- can be used as lids of storage pots or for wrapping food

Alloys and Tempers:

- 8011/1235 - 0

Thickness:

- 10-25 microns
